

Today, businesses face an inevitable challenge: cyber breaches. While leaders strive to prevent them, the harsh reality is that attackers only need to succeed once, while defenders must be flawless every time. Breaches bring about disruption, financial harm, and damage to reputation. Enterprises seek assurance that they can maintain critical operations and safeguard data even amid breaches. ColorTokens offers a solution beyond traditional methods, providing breach readiness by halting ransomware and malware before they wreak havoc. It ensures comprehensive protection across all assets and environments—IT, IoT, and OT—whether in data centers, the cloud, or containers, eliminating any weak points in defense. With swift implementation and minimal disruption to business, it delivers peace of mind and resilience.

**ColorTokens helps organizations prepare for the inevitable breach of their network defenses by stopping the lateral movement of malware and ransomware using zero-trust microsegmentation. With ColorTokens, you can stop a breach before it becomes a crisis.**

ColorTokens safeguards vital systems and data for diverse clients across various sectors, encompassing healthcare, pharmaceuticals, manufacturing, financial services, government agencies, and defense organizations.

## Differentiators

- Quantify and visualize risk reduction to help articulate the value of your cyber security initiative to stakeholders.
- Comprehensive coverage of all possible points of breach: data center servers, user endpoints, containers, cloud workloads, Internet-of-Things devices, and Operational Technology.
- Rapid time-to-value with immediate security benefits, and progressive ongoing improvement with zero trust enforcement.

ColorTokens gives us complete visibility into our network assets and traffic to protect our computing infrastructure with zero-trust security policies. It helps us ensure the continuity of care for our patients and defend our electronic medical records in the event of an attack. ColorTokens helped us make our systems breach-ready, by design.

-- CIO of a Leading Cancer Center, Houston

# Be Breach Ready

With Zero Trust Microsegmentation

# The Xshield Enterprise Microsegmentation Platform

Xshield, ColorTokens' flagship product, lets companies stop the spread of a breach while allowing valid business processes to continue. The unified administration console lets administrators visualize their diverse network landscape and establish granular micro-perimeters using software-defined microsegmentation. The SaaS-based ColorTokens engine is a unified policy decision point that enforces zero trust policies across many different types of assets, using both agent-based and agentless policy enforcement.

## Visualize

## A Leader in Cyber Innovation

ColorTokens, headquartered in San Jose, CA, holds over 20 patents and serves a diverse customer base spanning the private sector and government. With offices in the UK, Europe, the Middle East, and India, the company boasts a robust management team comprising industry veterans from VMware, Microsoft, Zscaler, Wipro, SAP, CrowdStrike, Cisco, and others. Additionally, ColorTokens has a prestigious advisory board featuring former CEOs, CIOs, and Chief Product Officers of leading software and global services companies.

The ColorTokens ecosystem includes technology Partner Integrations, leading Global Systems Integrators, Risk Advisory and Consulting Firms, and Value-Added Resellers. ColorTokens supports these partners with training, certifications, and zero trust best practices, and can provide consultants to assist with their projects.
