

ColorTokens is a Silicon Valley–headquartered cybersecurity company delivering mission-critical protection to enterprises worldwide. For over a decade, we have empowered organizations across the United States, Europe, the United Kingdom, and Asia to strengthen cyber resilience against increasingly sophisticated threats.

We are an engineering-driven company of approximately 400 employees, building innovative, AI-driven Zero Trust security solutions for public and private sector organizations operating in some of the world’s most targeted and highly regulated industries.

Recognized globally as a leader in microsegmentation, ColorTokens enables enterprises to adopt a resilient, breach ready security posture.

Be Breach Ready

Security breaches are no longer a question of if, but when. Nearly 80% of breaches begin with compromised identities, and over 90% of successful attacks involve lateral movement as adversaries spread across the enterprise to reach critical systems and sensitive data.

Being Breach Ready means addressing both—securing identities to prevent unauthorized access and limiting blast radius to contain attacks before they disrupt the business.

ColorTokens delivers Breach Readiness through an integrated Zero Trust approach that protects both identity and the enterprise environment.

PureID strengthens the identity layer, where most breaches begin. It works with your existing IAM solution, making it passwordless. By moving beyond traditional credential-based controls, PureID helps organizations eliminate common identity attack paths while securing access for employees, partners, and privileged users. With PureID, there are no passwords to compromise or steal—it uses a sophisticated digital signature based on user and device attributes that is virtually impossible for an attacker to emulate.

Xshield Enterprise Microsegmentation Platform™ protects the enterprise environment by stopping unauthorized lateral movement across data centers, cloud, and OT environments. Powered by intelligent automation and AI-driven policy orchestration, Xshield delivers the fastest path to effective microsegmentation—reducing attack surface and blast radius by up to 90% in under 90 days.

Together, PureID and Xshield enable organizations to prevent identity-based compromise, contain lateral movement, and operate with confidence in an era where breaches are inevitable.

Trusted by Leading Enterprises

ColorTokens protects enterprise customers across healthcare, manufacturing, defense, financial services, biotechnology, critical infrastructure, and technology.

Organizations consistently select ColorTokens for its deployment flexibility, comprehensive coverage across data centers, cloud, and OT environments, and unified visibility across legacy and modern infrastructure.

“ColorTokens helped us make our systems breach-ready, by design.”

- CIO, Leading Cancer Center, Houston

400+ Customers Globally, Including:

MD Anderson Cancer Center

City of Dallas

UTMB Health

CalBio

Ohio Mutual

Persistent Systems

Omega Healthcare

Recognized. Trusted. Proven.

ColorTokens is widely recognized by leading industry analysts and enterprise customers for advancing Zero Trust security across identity protection and microsegmentation.

Through PureID and Xshield, ColorTokens helps organizations address the two most critical dimensions of modern breaches—compromised identities and lateral movement—enabling enterprises to operate with confidence in an era where breaches are inevitable.

With a global footprint, advanced AI-driven capabilities, and a decade of securing mission-critical environments, ColorTokens continues to help organizations strengthen cyber resilience and define what it means to be breach-ready in the modern enterprise.
